In this section

Setup and Configure Scss

Implement the colors system
- Using Scss mixins

Create a Theme Service
- Manage the theme state
- Apply the theme on our UI

Allow the user to set the theme

**Make Controls customizable**
- Comply with Theme
- Directly styleable

Congratulations

Our very own Theming system

But hold on…

*Wait a second, I signed up to learn how to customize **Angular Material** themes, not build one from scratch…*

The best way to learn it

Is to build it yourself
